8. Trying things out safely
9. If something goes wrong
10. Updating the program (only when asked)

1. What the Training Register does

The Training Register is a Google Sheet with a **Tsavone** menu. From that menu you can:

- fill in course titles from course codes
- work out who passed and which certificate each person earns
- give every certificate a unique ID, such as **TSV-2027-T1.1-0001**
- make A4 certificates as PDF files, each with a QR code
- prepare certificate emails as Gmail drafts for you to check and send
- build a course summary for your completion report

Anyone can check a certificate on the public **verification page**, by scanning its QR code or typing its ID.

Where everything lives

Item	Where to find it
The register (use this every time)	Google Sheet "Tsavone Training Register": open the sheet
Certificate PDFs	Google Drive → My Drive → **Tsavone Certificates** → one folder per course code (for example T1.1)
Certificate emails	Gmail → **Drafts** (they are never sent until you press Send)
Verification page (public)	https://script.google.com/macros/s/AKfycbwV6gNlu3byQcLeGEd--6XVK4cYH-ceS-qnuvizbm0I7jiH2XnipLkEGkoMutA5QVo/exec
Course list (titles and days)	Your public Google Sheet "Tsavone Courses"
Logo used on certificates	Google Drive → "Tsavone logo for certificates.png" (do not delete)
Rules and settings	The **Settings** tab in the register

> **Tip:** bookmark the register in your browser so it is always one click away.

2. Where and how you use it

You do **not** need to install or upload anything again. The program is stored inside the register sheet itself. Each time you use it:

1. Open the **Tsavone Training Register** sheet in a web browser (Chrome is best) on a **computer**.
2. Make sure you are signed in to the Google account that owns the sheet.
3. Wait a few seconds until the **Tsavone** menu appears at the top, after Help.
4. Use the Tsavone menu items described in this guide.

> **Good to know**
>
> The Tsavone menu does not appear in the Google Sheets app on phones and tablets. Use a computer browser to run the menu.
>
> The verification page works on any device and needs no sign-in.
>
> You can open the sheet from Google Drive, from your bookmark or from the link above. They all open the same file.

Colleagues using the register

To let a colleague use the register, share the sheet with them as an **Editor** (Share button, top right). The first time they use the Tsavone menu, Google asks them to approve the same permissions you approved. Certificates they generate are saved in **their** Google Drive, and drafts go to **their** Gmail. Decide who generates certificates so that all PDFs end up in one place.

3. The course cycle, step by step

A. Before the course: enter participants

On the **Register** tab, add one row per participant, starting in the first empty row. Fill in only the white columns in the table below; the tool fills the rest.

Column	You type	Example
participant_name	Full name as it should appear on the certificate	Amina Nakato
organisation	Employer or sponsor	Gulu District Local Government
email	Address for the certificate email	amina@example.org
phone	Optional	+256 700 000 000
course_code	Code from the catalogue	T2.1
start_date, end_date	Course dates	10 Mar 2027 and 14 Mar 2027
location	Where it ran	Kampala, Uganda
format	Choose from the dropdown	Open enrolment
status	Choose **Draft**	Draft
notes	Optional notes	Sponsored by project X

Then click **Tsavone → Fill course titles from codes**. The course_title column fills in from your course list. Titles you typed yourself are kept.

> **Leave empty:** certificate_id, course_title, result, certificate_type and issued_date. The tool fills them.

B. After the course: scores and results

1. Enter **attendance_percent** (for example 95), **pre_test_score** and **post_test_score** for each person.
2. Click **Tsavone → Calculate results**.
3. Check the **result** column: **Pass** or **Did not complete**. The **certificate_type** column shows **Competence** or **Completion**, and **notes** shows the improvement, for example "Improvement: +23 points".

Rule (change in Settings)	Meaning
Attendance at least **80%** and post-test at least **60**	**Pass**: the participant gets a certificate
Pass with post-test at least **75**	**Certificate of Competence**
Pass with post-test below 75	**Certificate of Completion**
Anything else	**Did not complete**: no certificate

Rows that are already **Issued** or **Revoked** are never changed by Calculate results.

C. Make the certificates

1. Click **Tsavone → Generate certificates**.
2. It asks: "Make certificates for the N passing participant(s) who do not have one yet?" Click **OK**.
3. Wait. Each certificate takes a few seconds. A message confirms how many were saved.
4. Open **Google Drive → Tsavone Certificates → [course code]** and **check the first PDF** before sending anything.

Each row that receives a certificate gets a **certificate_id** (for example TSV-2027-T2.1-0001), today's **issued_date** and status **Issued**.

> **Large courses:** Google limits each run to 6 minutes, which is usually enough for several dozen certificates. If the message says it stopped early, run Generate certificates again; it continues where it stopped.

D. Email the certificates

1. On the left edge of the sheet, click the **grey row number** of the first person to email. Hold **Shift** and click the grey row number of the last person. The rows turn blue.
2. Click **Tsavone → Email certificates (create Gmail drafts)**.
3. Open **Gmail → Drafts**. Each draft has the PDF attached, a short congratulations message, the certificate ID and the verification link.
4. Check each draft and press **Send**.

Rows that are not Issued, or have no valid email, are skipped and listed in the message.

E. Report on the course

1. Click **Tsavone → Course summary**.
2. A numbered list of courses appears (course code and start date). Type the number of the course and click **OK**.
3. A new tab opens, for example "Summary T2.1 2027-03-10".

The summary shows participants, passes, pass rate, average attendance, average pre-test, post-test and improvement, and certificates issued. It also has counts by organisation, and a ready-made sentence for your completion report. Copy the table and sentence into the report. Running the summary again replaces the tab with fresh numbers.

> **Optional:** add a column headed **sex** (or **gender**) to the Register, and the summary also counts participants by sex.

4. Corrections, reissues and revoking

Situation	What to do
A name or detail on an issued certificate is wrong	Correct the row. Click its **grey row number**, then **Tsavone → Generate certificates** and answer **YES** ("make or remake certificates for just these rows"). The old PDF is replaced and the original issue date is kept. Then email a new draft.
A certificate must be withdrawn	Set its **status** to **Revoked**. The verification page immediately shows REVOKED for that ID.
A participant was entered by mistake	If no certificate was issued, delete the row. If one was issued, set the status to **Revoked** instead, so the ID is never reused.
Scores were entered wrongly before issuing	Fix the scores and run **Calculate results** again.
Scores were wrong after issuing	Set status back to **Draft**, fix the scores, run Calculate results, then remake the certificate as above.

5. The verification page

Every certificate carries a QR code and its ID. Anyone, such as an employer, a donor or the participant, can check it:

- scan the QR code with a phone camera, or
- open the verification page (link in section 1) and type the certificate ID.

Page shows	When
VALID (green)	Status is Issued. Shows name, course, dates and certificate type.
REVOKED (red)	Status is Revoked.

Page shows	When
NOT FOUND (orange)	The ID does not exist, or the row is still Draft.

> **Privacy:** the page never shows email, phone, organisation, scores or notes. It does show the name to anyone who has the ID. Because IDs follow a sequence, someone could guess other IDs. For a sensitive course, keep rows in Draft status; they then show NOT FOUND.

6. Settings

Open the **Settings** tab and change only column B (value).

Setting	Current value	What it controls
pass_attendance_percent	80	Minimum attendance (%) to pass
pass_post_test_score	60	Minimum post-test score to pass
competence_post_test_score	75	Score for a Certificate of Competence
certificate_folder_name	Tsavone Certificates	Drive folder for PDFs
logo_drive_file_id	(filled in)	Logo on certificates and the verification page
signatory_title	Managing Director	Title under the signature line
sender_email_name	Tsavone Consulting Training	Sender name on emails
verify_url	(your /exec link)	Where QR codes point. **Do not change.**
course_sheet_id	(your course sheet)	Source of course titles and days
hours_per_day	7	Course hours = days x this number

7. Do and do not

Do	Do not
• Check the first PDF of every course before sending. • Use the Tsavone menu from a computer browser. • Keep status values to Draft, Issued or Revoked. • Revoke instead of deleting an issued certificate. • Ask colleagues to use the same account, or agree who issues certificates.	• Rename or reorder the column headings in row 1. • Delete the **Settings** tab or the logo file in Drive. • Create a **new** deployment of the verification page (QR codes would break). • Send out test certificates. • Change verify_url.

8. Trying things out safely

1. Click **Tsavone → Testing → Add test participants**. Three test rows appear, using your own email address with +test1, +test2 and +test3.
2. Try any menu item on them.
3. When finished, click **Tsavone → Testing → Remove test participants** and confirm. The test rows, their PDFs, their drafts and their summary tab are removed. Real participants are never touched.

9. If something goes wrong

Problem	What to do
No Tsavone menu	Reload the page (F5) and wait 10 seconds. Make sure you are on a computer, signed in to the owner account.
Google asks for permission	Click **Review permissions**, choose your account, then **Advanced**, **Go to Tsavone Training Register**, **Select all** and **Continue**. This happens once per new feature.
"Codes not found in the course list"	Check the course code spelling (for example T1.1) against the Tsavone Courses sheet.
"Missing attendance or post-test score"	Fill in those cells and run Calculate results again.
A certificate was not made	The person must show **Pass** in the result column. Run Calculate results first.
Wrong date on a certificate	Check the start and end dates in the row, then remake the certificate.

Problem	What to do
Logo missing	Clear Settings → logo_drive_file_id and click **Tsavone → Run setup again**.
Anything else	Take a screenshot of the message and the sheet, and send it to your support contact.

10. Updating the program (only when asked)

You only need this if an improved version of the program is provided.

1. In the sheet, click **Extensions → Apps Script**.
2. Open the latest **Code.gs** (link below). Press **Ctrl+A**, then **Ctrl+C**. In Apps Script, click **Code.gs**, click in the code, then press **Ctrl+A**, **Ctrl+V** and **Ctrl+S**.
3. Do the same for **Verify.html**, if it changed.
4. Click **Deploy → Manage deployments**, then the pencil icon. Set **Version: New version** and click **Deploy**. This keeps the same verification link.

Latest files: Code.gs · Verify.html
